CREDIT QUALITY RATINGS (% EX EQUITY)

A bond credit rating assesses the financial ability of a debt issuer to make timely payments of principal and interest. Ratings of AAA (the highest), AA, A, and BBB are investment-grade quality. Ratings of BB, B, CCC, CC, C and D (the lowest) are considered below investment grade, speculative grade, or junk bonds. Credit quality ratings use the highest rating available from either S&P Global Ratings or Moody's Investors Service. "NR" = Not Rated. May not add up to 100% due to rounding.

SHARE CLASS IDENTIFIERS

Class	ISIN	Bloomberg	Initial Sales Charge	Investment Manager's Fee*	Ongoing Charges**	Minimum
Class A Acc	IE00BGPKTC11	THSIAAU	Up to 5.00%	1.20% p.a.	1.45%	1,000 USD

Important Information

The information contained in this document is provided for reference only and does not constitute any investment advice. Investors are advised to seek independent advice before making any investment decision. Past performance is not indicative of future performance. In particular, funds which are invested in smaller companies may involve a higher degree of risk and are usually more sensitive to price movements.

The Fund is a sub-fund of Thornburg Global Investment plc, an open-ended investment company with variable capital constituted as an umbrella fund with segregated liability between sub-funds, authorized and regulated by the Central Bank of Ireland ("CBI") as an Undertaking for Collective Investments in Transferable Securities ("UCITS").

Investors should carefully read and consider the fund offering document(s), which contain details on investment objectives, risk factors, charges and expenses of the fund, before making any investment decisions. Investors should read carefully the fund notes before making any investment decisions.

Investment involves risk and investors may not get back the amount originally invested. The fund may use derivative instruments. In adverse market situations, the fund's use of derivatives may become ineffective and the fund may suffer significant losses. These and other risks are described in the offering documents. Please read the offering documents, including the risk factors, carefully. US/HK dollar-based investors are exposed to currency fluctuations in the US/HK dollar exchange rate where the fund is denominated in currencies other than US/HK dollar.

The document has not been reviewed by the Securities and Futures Commission ("SFC"). Issued by Wealth Management Cube Limited.

Glossary

Effective Duration - A bond's sensitivity to interest rates, incorporating the embedded option features, such as call provisions. Bonds with longer durations experience greater price volatility than bonds with shorter durations.

Average Effective Maturity - Average length of time until fixed income securities held by a fund reach maturity and are repaid.

Average price is the mean price of an asset or security observed over some period of time. It is calculated by finding the simple arithmetic average of closing prices over a specified time period.

Yield to Worst (YTW) - The lowest potential yield that can be received on a bond without the issuer actually defaulting.

Mortgage Pass-Through - A security consisting of a pool of residential mortgage loans. Payments of principal, interest and prepayments are "passed through" to investors each month.

Asset-backed Security (ABS) - A security whose value and income payments are derived from and collateralized (or "backed") by a specified pool of underlying assets. The pool of assets is typically a group of small and illiquid assets that are unable to be sold individually. Pooling the assets into financial instruments allows them to be sold to general investors, a process called securitization, and allows the risk of investing in the underlying assets to be diversified because each security will represent a fraction of the total value of the diverse pool of underlying assets.

Collateralized Mortgage Obligation (CMO) - A type of mortgage-backed security that creates separate pools of pass-through rates for different classes of bondholders with varying maturities, called tranches. The repayments from the pool of pass-through securities are used to retire the bonds in the order specified by the bonds' prospectus.

Commercial Mortgage-backed Securities (CMBS) - A type of mortgage-backed security backed by commercial mortgages rather than residential real estate. CMBS tend to be more complex and volatile than residential mortgage-backed securities due to the unique nature of the underlying property assets. CMBS issues are usually structured as multiple tranches, similar to collateralized mortgage obligations, rather than typical residential pass-throughs.

U.S. Treasury securities, such as bills, notes and bonds, are negotiable debt obligations of the U.S. government. These debt obligations are backed by the "full faith and credit" of the government and issued at various schedules and maturities. Income from Treasury securities is exempt from state and local, but not federal, taxes.

Derivative - A security whose price is dependent upon or derived from one or more underlying assets.

Sovereign Debt - Government debt that has been issued in a foreign currency.

The Bloomberg U.S. Universal Index (BBG US Universal TR Value) represents the union of the U.S. Aggregate Index, U.S. Corporate High-Yield, Investment Grade 144A Index, Eurodollar Index, U.S. Emerging Markets Index, and the non-ERISA eligible portion of the CMBS Index. The index covers USD denominated, taxable bonds that are rated either investment-grade or below investment-grade.

The performance of any index is not indicative of the performance of any particular investment. Unless otherwise noted, index returns reflect the reinvestment of income dividends and capital gains, if any, but do not reflect fees, brokerage commissions or other expenses of investing. Investors may not make direct investments into any index.
